

## ABOUT YOUR SPRINGS

Dear Patient:

In order to help correct your malocclusion Dr. White has installed a new product in your mouth called a "FORSUS" spring.

This appliance has some important advantages over such products as "headgear," not the least of which are cosmetic, safety and comfort.

However, please treat your "FORSUS" spring(s) with care. They are expensive and are not indestructible. If you chew on them they will break. If you try to bend them sharply with your fingers or if you try to stretch them by opening your mouth extremely wide they may break or come apart.

If treated properly, they should help speed your treatment along! Thank you for your co-operation.

Dr. Barry White
